Project aims

To develop a web-based system for Quran memorization centers using PHP. The system is designed to serve students, teachers, and supervisors by providing an interactive platform that facilitates monitoring student progress, managing educational sessions, and organizing administrative tasks.

Functional

Requirements

1. As a student, I want to:

- 1.1. view my teacher's name so that I know who is guiding me.**
- 1.2. see my progress and grades so that I can track my improvement.**
- 1.3. view my homework and task so that I can complete them on time.**
- 1.4. see the class schedule so that I know when my sessions are.**
- 1.5. access the Quran so that I can read and memorize it directly from the platform.**
- 1.6. read daily Athkar so that I stay spiritually connected.**

2. As a teacher, I want to:

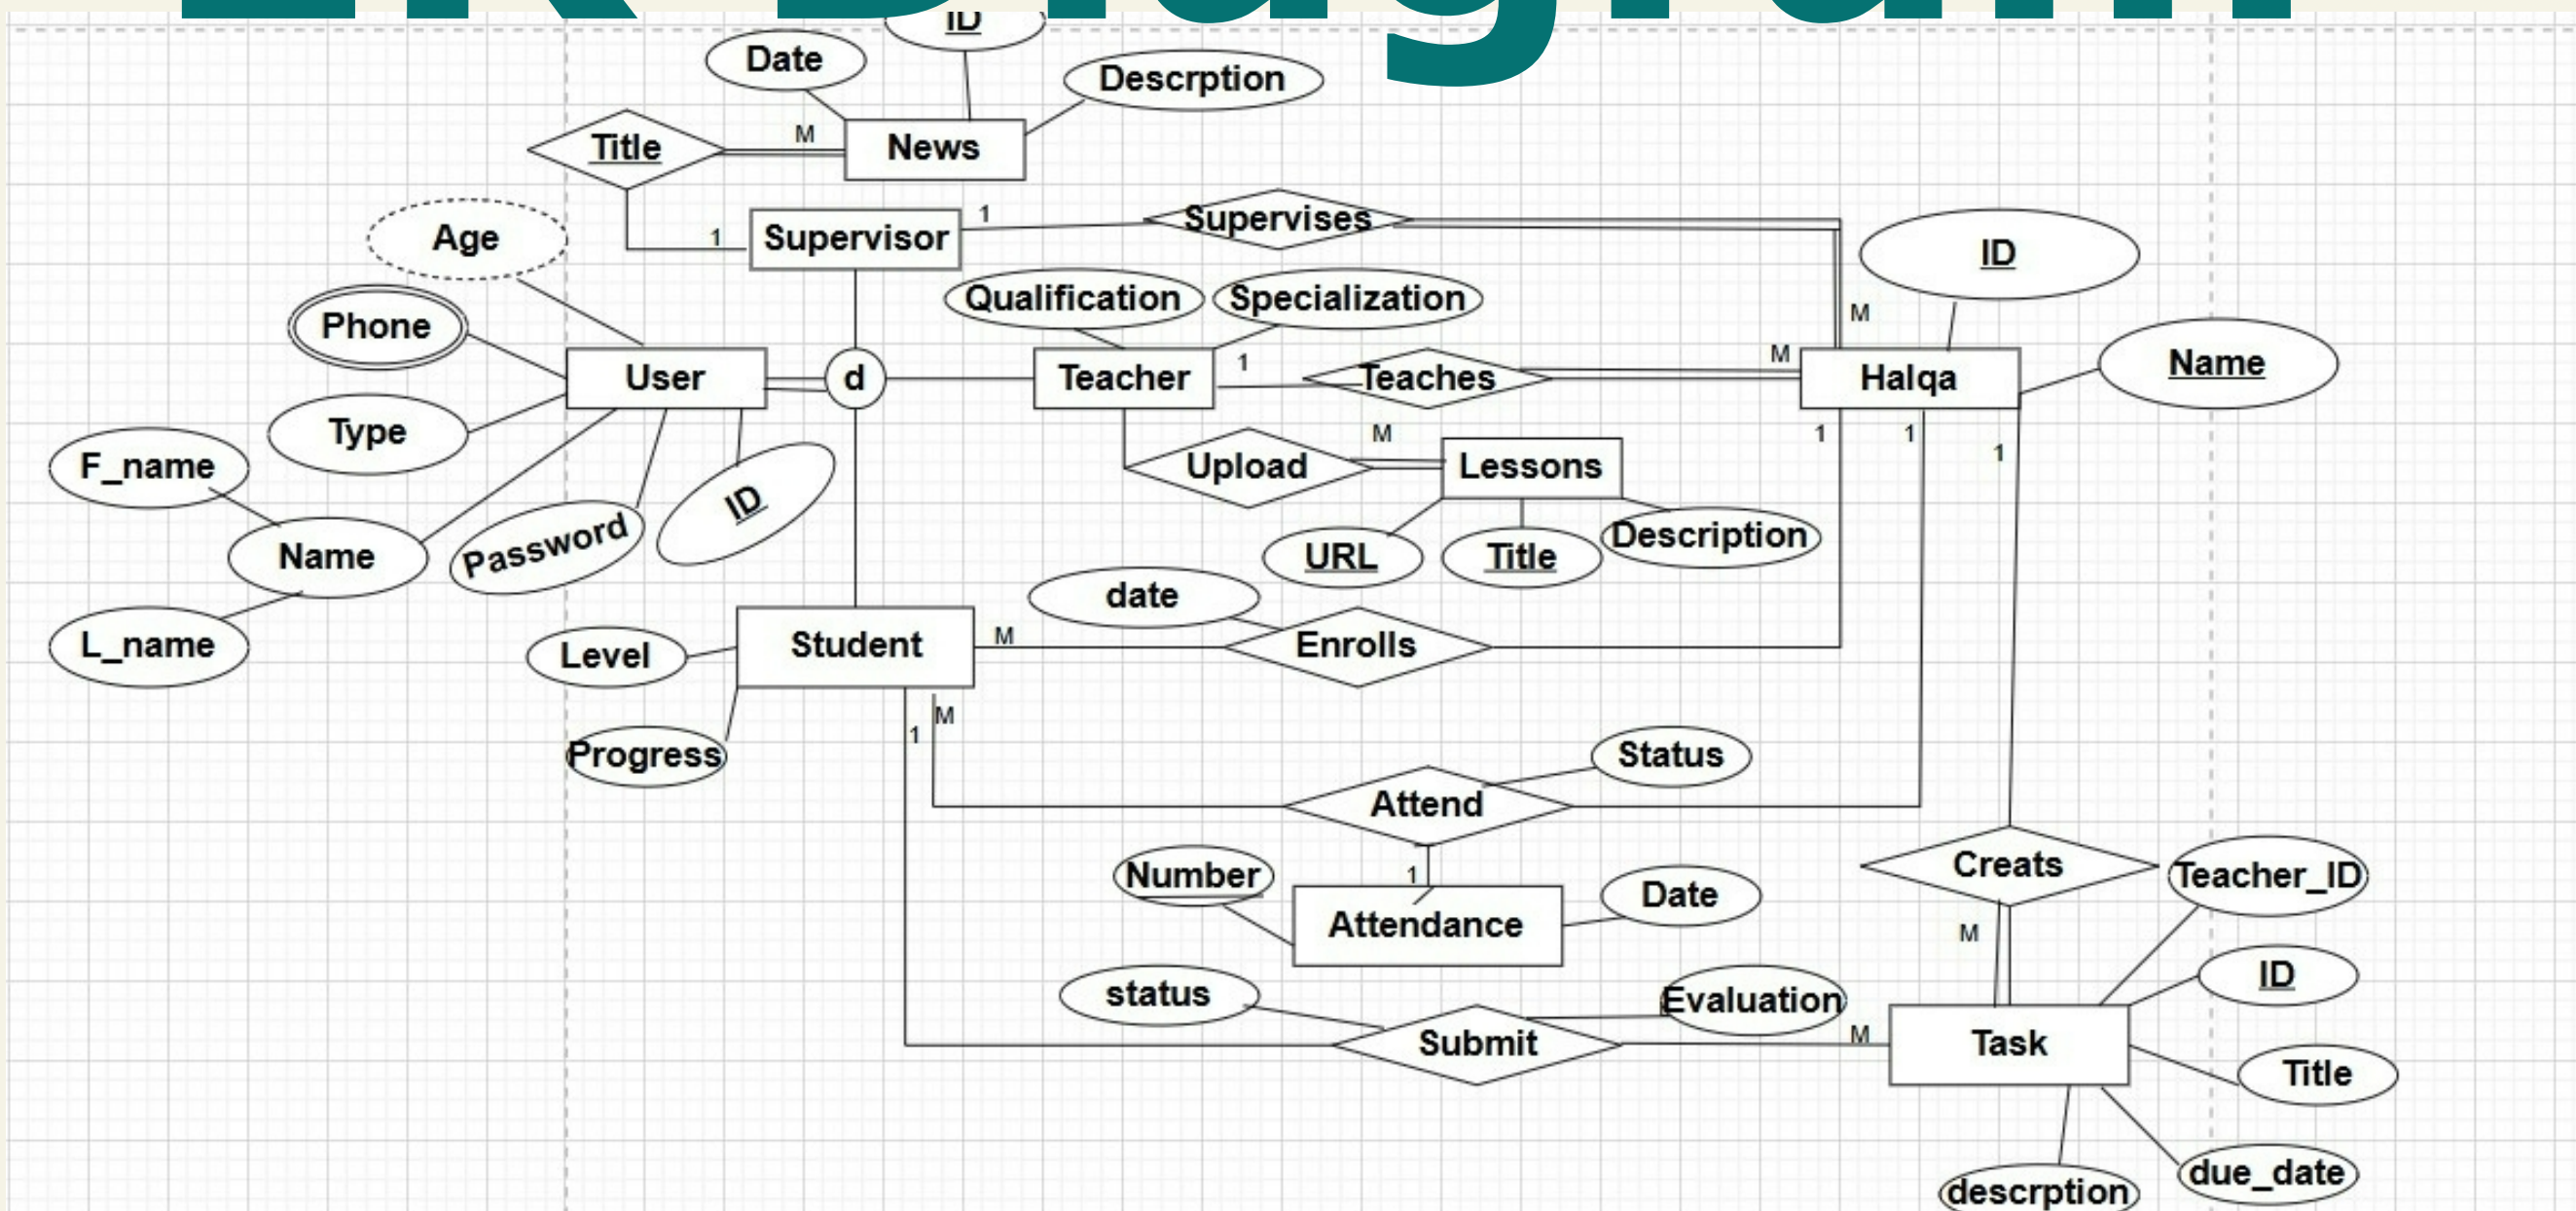

- 2.1. view a list of my students so that I can manage my halaqa.**
- 2.2. add notes for each student so that I can give them personalized feedback.**
- 2.3. record students' grades and attendance so that I can evaluate their performance.**
- 2.4. schedule classes so that students know when to attend.**
- 2.5. update student progress so that their records are always current.**

3. As a supervisor, I want to:

- 3.1. create and manage user accounts so that I can control who accesses the system.**
- 3.2. create and manage halaqas so that the organizational structure is clear.**
- 3.3. assign teachers to halaqas so that each group has a responsible instructor.**
- 3.4. access all data so that I can oversee and manage the center effectively.**
